Web Access Management

getbusi

Get*busi* puts you in control with a simple and effective solution.

Web Access Management

Get*busi's* web access management system provides reliability and security for your organisation's online activities.

Get*busi* offers:

- Intelligent content filtering that blocks access to undesirable sites

- Bandwidth management and download limits

- The ability to set policies for different users

- The ability to ban downloads of large multimedia file types such as MP3's

- Caching that improves Internet performance and reduces costs

- Browser based interface

- Full reporting and the ability to change a user or group's policy with the click of a mouse

- Easy implementation. Professionally installed and immediately activated

- Seamless integration with your authentication systems and security infrastructure

- Authentication for LDAP and Microsoft systems allowing existing user names, passwords and groups to be used

Get*busi* is the easiest and most cost effective way to manage your organisations online activities

getbusi

"We wanted to limit staff Internet usage for non-work purposes because individuals were hogging the majority of the bandwidth. We needed to know what the net was being used for and get*busi* gave us those tools"
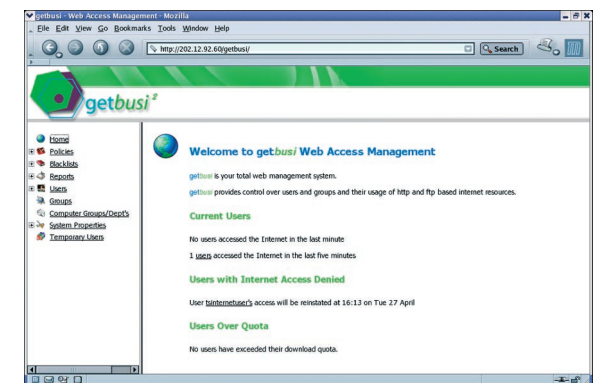

- Raj Reddi, Queensland Law Society

"We wanted to provide security for our organisation and the people using the Internet. We like receiving reports and the fact we do not have to spend a lot of time controlling it ourselves"

- Phil Seaman, Lactos Cheese

"In terms of staff management it is just brilliant, our organisation benefits from the user-based policy feature, which allows us to manage users by granting them different levels of access"

- Gary Cripps, Anglicare
